

# EXTRACTS AND FLAVOURINGS

PRODUCT RANGE: CONCENTRATED SEASONING

PERFORMANCE INSIDE

# CONCENTRATING ON THE ESSENTIALS

So many things influence the way things taste. If you want to manufacture outstanding products that look and taste great and that feature outstanding seasoning power, you will need the best raw materials, sophisticated technology and plenty of expertise.

RAPS has always been committed to good taste. For more than twenty years we have worked hard to develop the latest technologies and the best possible processes to combine natural products with efficiency and exceptional sensory properties. We always focus on the essentials: quality, the best possible taste and technology – and we focus on you, our customers.

## How extracts are used

Extracts are used in many different ways – and are suitable for almost every application: from convenience foods, to snacks and delicatessen, to dairy products, meat, bakery products and frozen foods. We would like to give you a glimpse of some of the many product solutions we offer. And of course, we can develop custom solutions for your own particular recipes.

An enormous range of RAPS extracts, extract blends and flavourings are available in liquid, emulsified and dry product form, which makes them easy and convenient to handle. Especially our high pressure extracts are a highlight of modern food technology – a modern procedure, of which we are very proud. Take a trip with us into a world of limitless flavour and discover this remarkable aspect of our modern food technology.

## THE BENEFITS OF HIGH PRESSURE EXTRACTS AT A GLANCE

### SAFETY

- High levels of microbiological safety
- Standardised quality
- Gentle manufacturing processes, maximum hygiene standards
- Long shelf life with no loss of quality
- Consistent seasoning intensity

### QUALITY

- High flavour-correlation coefficient: flavour profiles that come very close to the natural spice
- High extract concentration
- State-of-the-art technologies that produce ultimate quality
- Reliable product properties
- Easy to handle and a guaranteed consistent, natural flavour

# MONO EXTRACTS & CONCENTRATES

Ultimate quality thanks to an advanced production process: RAPS' natural extracts are available in liquid and dry product form and provide an impressively intense flavour.

## WHAT MATTERS MOST:

### SEASONING POWER

Even if spices and herbs are ground very finely, the substances in them that are responsible for flavour and aroma are only partially released, because they are locked inside the plant cells. Our highly concentrated extracts have much more seasoning power. Because they are up to 40 times more concentrated, you can achieve a full flavour experience using only very small doses.

### STANDARDISED SEASONING QUALITY

The flavour and intensity of natural herbs and spices vary depending on harvest and origin. Thanks to the latest analytical methods, RAPS extracts always provide consistent quality and seasoning power.

### EXCEPTIONAL STABILITY

Weight, flavour and general quality losses are kept to a minimum and the essential oil content remains very stable.

### SUSTAINABLE PRODUCTION

RAPS is dedicated to production methods that preserve the environment and our resources. For example, our high pressure extracts do not contain any solvent residues. The strictest hygienic standards apply.

### CONVENTIONAL PROCESSES AND HIGH PRESSURE EXTRACTION

RAPS uses high pressure extraction for selected products – a process which produces highly concentrated high pressure extracts. We also offer other types of extracts and manufacturing processes.

### EFFICIENCY

Extracts are an efficient and economical alternative to natural herbs and spices. Seasoning extracts can save time in production because they mix in more quickly and dissolve completely.

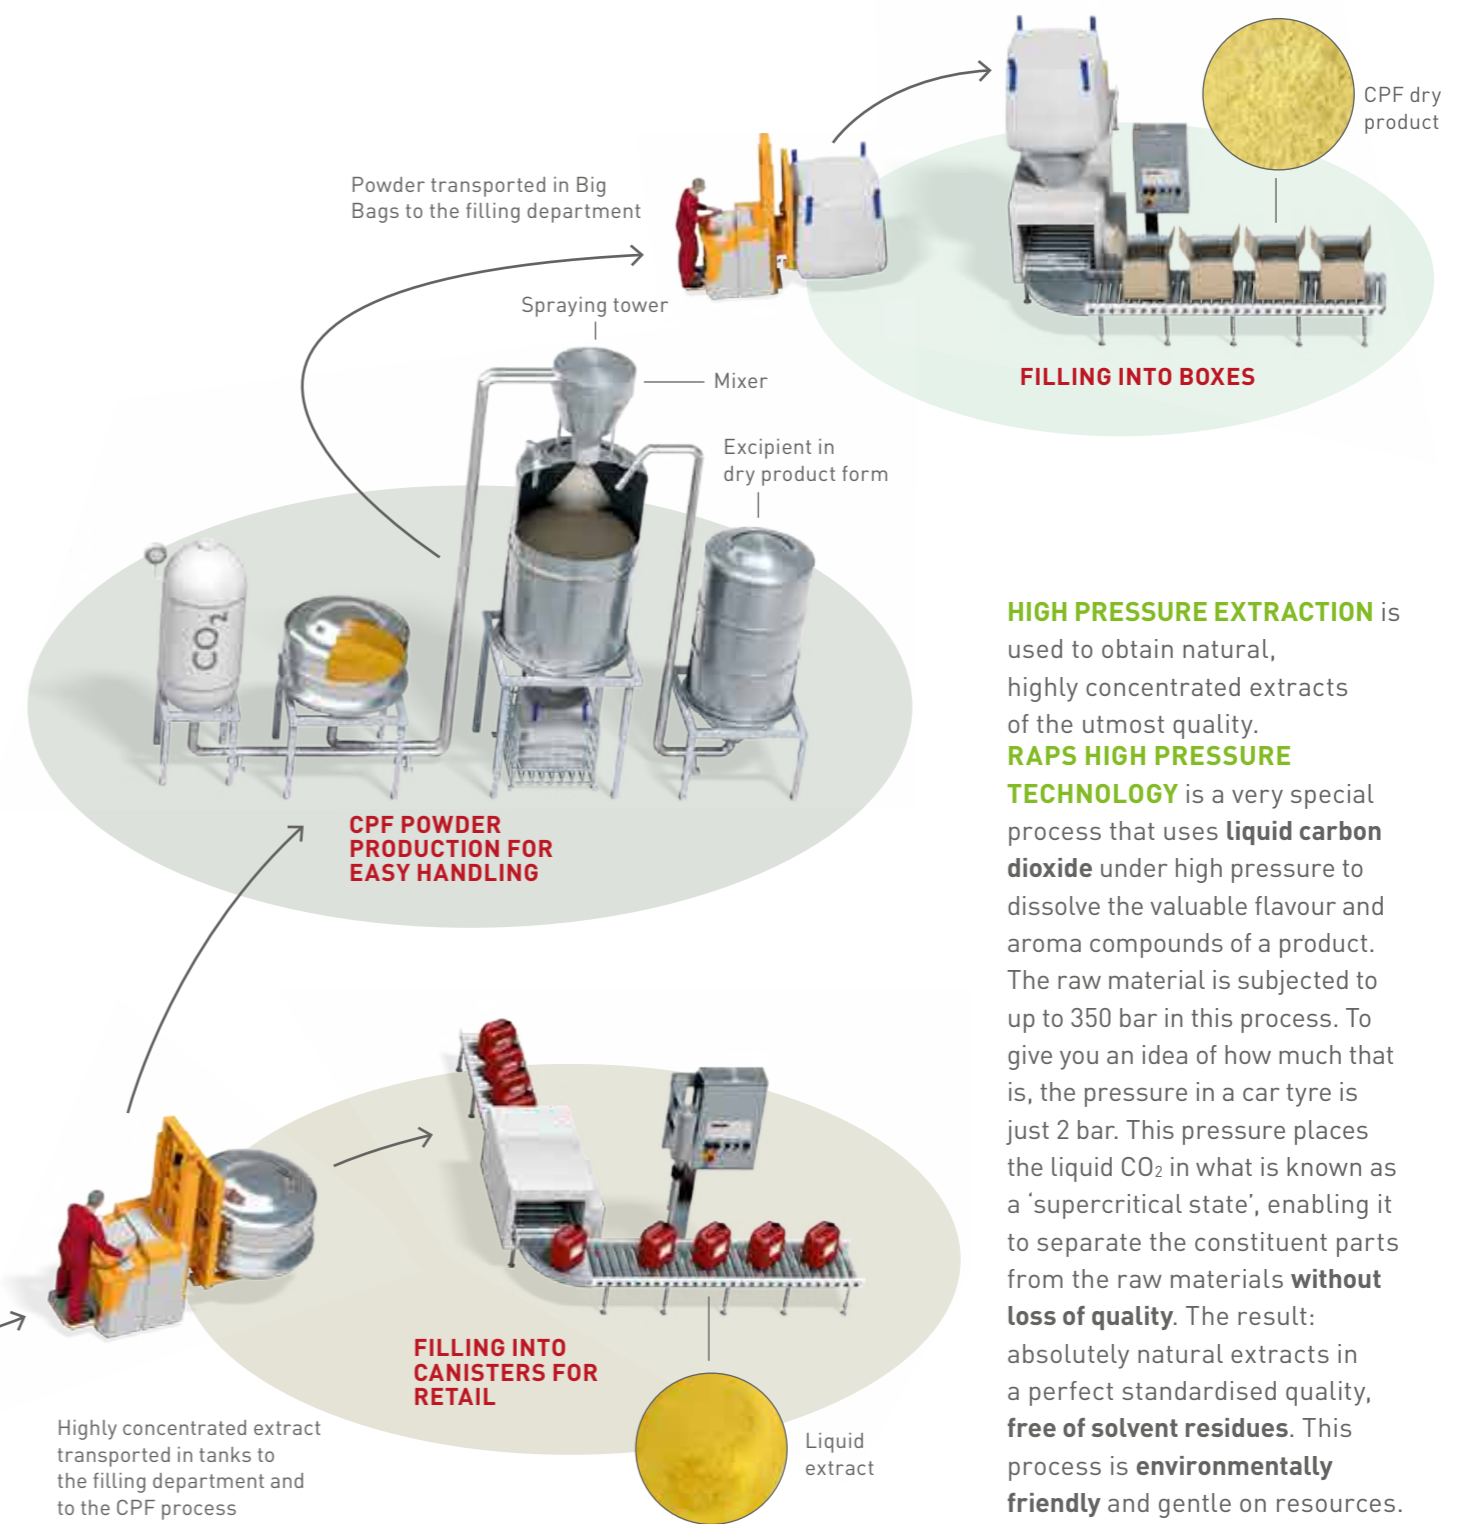

#### AT A GLANCE

- High quality thanks to gentle production process
- Extracts without additives subject to declaration
- Highly efficient and economical

# HIGH PRESSURE EXTRACTION CAPTURES THE FULL RANGE OF SEASONING

Pepper serves as a good example to illustrate this

**HIGH PRESSURE EXTRACTION** is used to obtain natural, highly concentrated extracts of the utmost quality. **RAPS HIGH PRESSURE TECHNOLOGY** is a very special process that uses **liquid carbon dioxide** under high pressure to dissolve the valuable flavour and aroma compounds of a product. The raw material is subjected to up to 350 bar in this process. To give you an idea of how much that is, the pressure in a car tyre is just 2 bar. This pressure places the liquid CO<sub>2</sub> in what is known as a 'supercritical state', enabling it to separate the constituent parts from the raw materials **without loss of quality**. The result: absolutely natural extracts in a perfect standardised quality, **free of solvent residues**. This process is **environmentally friendly** and gentle on resources.

# HIGH PRESSURE PROCESS

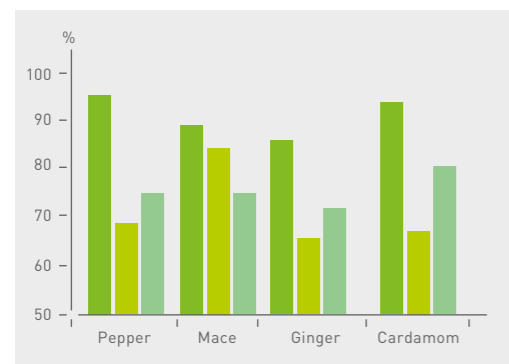

We use **high technology** to achieve **high quality** and that way, we give you an economical head-start. We will gladly develop custom variations for your own particular recipes. Even the finest nuances can be controlled using technology combined with trained instincts.

Every **RAPS HIGH PRESSURE EXTRACT** is made from selected raw spices using an **aroma-preserving, selective extraction method with natural carbon dioxide**. High pressure extracts are therefore free of solvent residues.

**HIGH PRESSURE EXTRACTION** is extremely gentle and works without placing too much thermal stress on raw materials. High pressure extracts contain much higher concentrations of sensitive, flavour-relevant components which means flavour intensity is much higher and the flavour itself much **more natural than ever before**, even though there is a similar amount of essential oils in the extracts.

**RAPS HIGH PRESSURE SPICE EXTRACTS** are made in our factory in Kulmbach (Germany) using natural herbs and spices. All they contain are the substances that produce flavours and aromas, in concentrated form. They are free of cellulose, which is not only a potential bacteria carrier, but also prevents the seasoning from quickly taking full effect. In short, **RAPS HIGH PRESSURE EXTRACTS** offer **top quality** as well as **outstanding flavour** and aroma and are an economical alternative to natural spices.

## AROMA-CORRELATION COEFFICIENT FOR DIFFERENT SPICES AND FLAVOURINGS

- The higher the correlation coefficient, the more similar the product is to the original material.
- The sensory properties of high pressure extracts can hardly be distinguished from the natural spice.

■ High pressure extract  
■ Solvent extract  
■ Essential oil

# CPF PROCESS

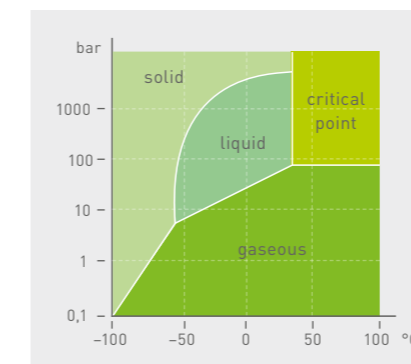

**CPF TECHNOLOGY** can be used to transform liquids perfectly into dry powder form products. **The concentrated powder form technology** is suitable for a wide range of fluids: watery and alcohol-based solutions, vitamins, flavourings, vegetable oils and fats, essential oils – and also plant extracts.

**CPF TECHNOLOGY** enables the production of tailor-made products with **high quality taste and aroma**, which provide a perfect powder CONSISTENCY and thus easy dosage.

## LOTS OF POSSIBILITIES

- Extremely gentle – ideal for sensitive raw materials
- Suitable for a wide range of viscosities
- Does not create lumps
- Liquid and dry product components mix smoothly
- Carries maximum active ingredient
- No quality losses caused by oxidation or high temperatures
- Easy combination of lipophilic substances and water fluids
- Free choice of carriers / carrier blends: starches, silicic acid, cellulose and emulsifiers
- Range of grain sizes on request

## THE SUPERCRITICAL PHASE

When pressure and temperature exceed the 'critical point' of 74 bar and 31°C, CO<sub>2</sub> combines the benefits of gas and liquid solvents. The properties of the CO<sub>2</sub> as a solvent can be controlled by varying pressure and temperature. This allows you to extract precisely the components you require. The trick is to identify the perfect parameters for each raw material. This process is suitable for almost any kind of dried herb and spice.

# EXTRACTS

With so many applications and products, the requirements are considerable. RAPS has the perfect solution for your particular recipe, whether in liquid or powder form.

# HERB OIL CONCENTRATES

Our herb oil concentrates are manufactured in a particularly gentle process, which is the only way to fully preserve the flavour of the original product.

MINIMUM  
BATCH  
SIZE ON  
REQUEST

## RAPS HERB OIL CONCENTRATES

In order to preserve the full flavour, RAPS uses an especially gentle **cold-pressing process**. Plant Press Extraction uses temperatures not exceeding 40°C and was developed in-house to preserve the intensive taste and aroma of even the most sensitive herbs. That is why **RAPS HERB OIL CONCENTRATES** guarantee the **genuine taste of the original product**.

Unlike conventional water-vapour distillates, our **RAPS HERB OIL CONCENTRATES do not contain any unwanted off-notes**. Our gentle pressing process also preserves important components such as for instance sabinene hydrate acetate, which is what gives marjoram its natural freshness.

There are many ways to use natural **RAPS HERB OIL CONCENTRATES**: their intensive flavour and aroma make them ideal for manufacturing delicatessen as well as soups, sauces and dairy products.

## HERB OIL CONCENTRATES

ITEM	NAME	CONSISTENCY	DOSE IN G/KG	SOLUBILITY	PRIMARY CARRIER	TRADE DESCRIPTION

### AT A GLANCE

- Clean Label
- Intensive flavour
- Natural flavour profile without off-notes
- Universal application
- Very high yield but minimum usage rate
- High microbiological stability
- Standardised quality
- Stable taste and aroma

# SPECIAL SPICE EXTRACTS

Liquid or in dry powder form, RAPS seasonings offer a well-balanced flavour profile and outstanding intensity.

- Made using high-grade spices and extracts
- Authentic flavour profile
- Standardised quality
- Clear and Clean Label
- Concentrated seasoning power – low usage rate
- High added value

## SPECIAL SPICE EXTRACTS

### TOPLINE

A combination of the **finest raw spices and extracts** guarantees the best possible seasoning power and almost entirely standardised quality. Low usage rates make **TOPLINE** the economical alternative to raw spices, which is subject to serious fluctuations in price and quality.

**TOPLINE** is on a par with raw spices in terms of flavour and aroma, and gives products the authentic flavour which consumers know and love.

### BENEFITS

- Does not contain EU-allergens subject to declaration
- Simple declaration: spices/spice extracts
- Highly economical

### RAPSENSATION

RAPS combines **selected raw spice extracts** to produce some extraordinary flavours. Harmonious overall compositions offer sophisticated flavour profiles and a high level of intensity: elaborate variations cater for Asian, Mexican and Oriental cuisine, as well as seasonal compositions and of course custom extract compositions for your products. **RAPSENSATION** is also suitable for sensitive products on account of its high microbiological safety.

### BENEFITS

- Very low usage rates due to high concentration
- Wide range of applications
- Even distribution of the extract in the final product
- Neutral carriers

### RAPSOLUTION

Our solution to the toughest challenges: **RAPSOLUTION** are **special compositions** of spice extracts that have **particular properties**. They are problem-solvers in the truest sense of the word.

### BENEFITS

- Does not contain EU-allergens subject to declaration
- High added value due to strong effect
- High level of microbiological safety

# TOPLINE

RAPS TOPLINE provides full seasoning power, a high level of product safety and excellent economics.

MINIMUM  
BATCH  
SIZE ON  
REQUEST

**RAPS TOPLINE** – a combination of high-grade extracts and finely balanced spices. These are universally usable seasonings that offer **full flavour and a high level of seasoning power**. What is especially attractive about them is that they produce an outstanding, intensive flavour even at very low usage rates.

## TECHNOLOGIES

Our TOPLINE seasonings are made on the basis of natural raw materials such as spices and extracts. They contain no EU-allergens subject to declaration, which is a clear economic benefit. The same applies to product safety, since **standardised mixes** contain lower bacterial counts because of the extracts they contain, while guaranteeing consistent flavour.

More flavour and optimum safety

### RAPSOLUTION CLEANTASTE

More flavour without any flavour enhancers

### RAPSOLUTION SALTCONTROL

More flavour with less salt

## RAPSOLUTION AT A GLANCE

- No E-numbers that require labelling – suitable for Clean Label
- No allergens subject to declaration
- Simple declaration: usually spice extracts

# FLAVOURINGS

Allow RAPS to invite you into the world of flavourings. Our range is a wide one and we've built up our expertise over decades. Take FLAVOCAPS technology for example: this microencapsulation technique allows flavour to be released as and when needed.

## FLAVOURINGS

### FLAVOCAPS

Our **FLAVOCAPS** technology protects flavours and aromas and ensures that they are released **at exactly the right time** – which is whenever you want. Conventionally manufactured flavourings become volatile even at low temperatures; tastes and aromas start dissipating the moment you open the packaging. Furthermore, temperature, oxygen and light can cause chemical changes which affect flavours.

**RAPS FLAVOCAPS** are specially protected flavours that **do not deteriorate**, even if stored for longer periods.

### FLAVOURS

**FLAVOURS** are chemically defined substances with aromatic properties. Around 10,000 naturally occurring **FLAVOURINGS** have been identified so far. They are often used when high levels of efficiency and standardisation are required.

#### A BRIEF GUIDE TO FOOD LAW

According to the Flavourings Regulation (EC 1334/2008), a **FLAVOURING** is a product which is not actually deigned for consumption but which is added to foods to give them a particular flavour and aroma. Artificial and nature-identical flavourings are grouped together within the term 'flavouring'.

**NATURAL FLAVOURINGS** refer only to those that are obtained from natural substances using natural processes such as heating or extraction. For example, at least 95 percent of the flavouring component of natural pepper has to come from pepper, and less than 5 percent from other natural sources such as chilli.

A **FLAVOURING EXTRACT** is any flavouring obtained through suitable physical, enzymatic or microbiological processes (such as extraction). These include spice extracts.

# FLAVOCAPS

RAPS is an expert in flavouring technology of the highest calibre. FLAVOCAPS are our response to a wide range of challenges concerning taste.

## FLAVOCAPS TECHNOLOGY

We encapsulate sensitive, volatile aromatic substances into a matrix of maltodextrin and starch. This is called microencapsulation, and it releases the flavouring only once it is in the products itself, or when it is consumed, so that the full force of the flavour is released exactly **at the right time**. This means it is no longer necessary to add excessive amounts of flavourings to compensate for dissipation. **RAPS FLAVOCAPS** are also highly water-soluble which makes them easy to handle.

## DIVERSE AND MULTI-FUNCTIONAL

**FLAVOCAPS** can be used in all sorts of ways: bake mixes, instant beverages, instant desserts, dried soups, tablets, snacks, chewing gum – and they are ideal in lots of other applications as well. RAPS technicians have also developed **FLAVOCAPS ULTRA** for specialised applications such as soups. Its matrix material is designed so that the flavour is only released in products containing liquid after a considerable delay, or only when the product reaches a certain temperature.

## AT A GLANCE

- Controlled release of flavour
- No loss of flavour
- No premature chemical reactions
- Even distribution in the final product
- Microbiologically safe and stable
- Easy to dose
- Outstanding storage stability

## INJECTIONS

### DEPTH OF TASTE

With rubs, sprinkles and seasoning sauces you can apply a lot of flavour to the surface of meat, but if the taste has to penetrate deep within, then **INJECTIONS** are the way to go. We provide a wide range of intensively flavoured extract blends. On demand the equivalent flavour can also be offered as a **SPRINKLE**.

# PICTOGRAMS

## NO E-NUMBERS SUBJECT TO DECLARATION

These products do not contain E-numbers which are subject to labelling.

## NO ALLERGENS SUBJECT TO DECLARATION

Products that do not contain allergenic ingredients such as mustard, milk, nuts or gluten. Labels do not have to specify allergens, according to the German Food Ordinance.

## NO PALM OIL/FAT

Products with this label do not contain any palm oil or fat.

## SUITABLE FOR KOSHER

These products are suitable for producing KOSHER foods and can be certified on request.

## SUITABLE FOR HALAL

These products are suitable for producing HALAL foods and can be certified on request.

## VEGETARIAN

Vegetarian cuisine is growing in popularity. These products contain no meat or meat derivatives.

## VEGAN

These products can be used to make vegan end-products since they do not contain any animal-derived ingredients.
